

FOR IMMEDIATE RELEASE

Evidence In Motion Partners with Aviv Clinics to Launch Groundbreaking Hyperbaric Oxygen Therapy Courses

Louisville, KY - Evidence In Motion (EIM), the leader in education solutions for healthcare providers, is thrilled to announce an exciting new partnership with Aviv Clinics, global pioneers in novel, evidence-based applications of hyperbaric oxygen therapy (HBOT). This collaboration marks a significant milestone as EIM continues to stay at the forefront of medical science, offering healthcare professionals advanced learning opportunities. This partnership will launch with a series of self-paced, scientist-developed courses designed to provide comprehensive knowledge of HBOT's role in treating a variety of conditions, including long COVID, post-stroke recovery, and traumatic brain injuries.

Courses now available through EIM include:

- 1. Long COVID Treatment with Hyperbaric Oxygen Therapy (AOTA Approved)**
- 2. Hyperbaric Medicine: Then, Now, and How**
- 3. Post-Stroke Recovery with Hyperbaric Oxygen Therapy**
- 4. Treatment of Traumatic Brain Injury and Post-Concussion Syndrome with Hyperbaric Oxygen Therapy**

A Partnership of Innovation: The partnership with Aviv Clinics represents a unique opportunity for EIM to offer exclusive insights into HBOT, a therapy that's pushing the boundaries of modern medicine. Aviv's state-of-the-art Florida clinic, which features the largest civilian hyperbaric oxygen facility in the United States, allows for deep exploration of the therapy's potential. Leading scientists from Aviv are directly involved in the development of these new courses, bringing a wealth of knowledge to participants.

"We are excited to partner with Aviv Clinics. Their research-developed protocol utilizing hyperbaric oxygen therapy for post-concussion syndrome, long COVID syndrome, post stroke recovery, and other conditions is pushing boundaries for the health industry," said Adriaan Louw, EIM's VP of Faculty, "HBOT has been proven to speed up the body's healing abilities. HBOT with additional holistic therapies aligns perfectly with the healthcare education Evidence In Motion provides. Working with Aviv allows Evidence In Motion to continue reimagining health care education, allowing professionals to transform their communities."

Hyperbaric Oxygen Therapy - The Future of Medical Science: With a focus on increasing oxygen flow to damaged tissues, HBOT represents a shift towards non-invasive, science-driven approaches to healing. Despite the futuristic nature of HBOT, its current reach is still relatively

small. However, with EIM's expansive network of healthcare professionals, the potential for growth is immense.

"We are pleased to partner with Evidence In Motion to offer these continuing education courses and introduce hyperbaric oxygen therapy as a complementary treatment." added Dave Globig, CEO of Aviv Clinics. "As a clinic committed to advancing recovery for patients with conditions like stroke, traumatic brain injury, and long COVID, we believe this education is essential for the medical community and those providers seeking the latest research to offer innovative care. By combining the latest research with practical applications, these CEUs will empower physicians and clinicians to better support their patients on the path to recovery."

About Aviv Clinics: Aviv Clinics is one of the most advanced brain clinics in the world. Aviv Clinics delivers a highly effective personalized protocol to enhance performance in the brain and body via the Aviv Medical Program. The Aviv Medical Team specializes in treating the symptoms of medical conditions including concussions, traumatic brain injuries, stroke, PTSD, long COVID, Lyme disease, fibromyalgia and more. The three-month regimen combines an evidence-based, specialized hyperbaric oxygen therapy (HBOT) protocol with cognitive and physical training and nutritional coaching. The program was developed based on nearly two decades of research and thousands of patients treated worldwide under the scientific leadership of Shai Efrati, M.D., chair of Aviv Scientific's Medical Advisory Board and director of the Sagol Center for Hyperbaric Research.
